PROJECT SUN STREAK (U)

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

Session Procedures Report (S/NF/SK)

PROJECT NUMBER: N-1                      SESSION NUMBER: 4  
DATE OF SESSION: 16 SEPT 87              TARGET COUNTRY:  
REFERENCE:                                  MISSION STATUS:  
TECHNIQUE UTILIZED: CRV                  SOURCE IDENTIFIER: 011

1. (S/NF/SK) Monitor Tasking: Per ops officer: Focus upon the "substance of the document".
2. (S/NF/SK) Source Tasking: Monitor and Source discussed a number of possible avenues of approach to satisfy the above tasking. The following (cues) were decided upon and used at the appropriate intervals during the session: a) concepts b) document c) (future) employment/application and d) use/application.
3. (S/NF/SK) Summary: Source's summary is attached.
4. (S/NF/SK) Comments: There have been very few targets in this monitor's experience which have manifested the degree of discontinuity and confusion inherent in this one. I did not expect this amount of difficulty in connection with what I assumed was a relatively easy task. I demand feedback ASAP; only then will I be able to identify and resolve the cause of the problem.

SESSION SUMMARY

SESSION: 16 SEP87, 1315- 1443 HRS

This document contains words, figures, illustrations, numbers, symbols, technical terms, and mathematical concepts. Perceive an object that is gray, smooth, shiny, long, round, cylindrical and metallic. The object is interesting, the subject is interesting, the concept is new and interesting, but the document is dull and boring.

While focusing on the application of this concept there was a shift to an outdoors setting, complete with a white-water stream and large, tall trees. There is a feeling of excitement, challenge, diversion, and of something old - something new. This is stimulating, interesting and pleasurable to some person connected to this document.

I am getting the impression that there is more than one document. One document deals with explanations and technical aspects, the other contains figures that support the theory or concept. It has something to do with crystal structure, frequency, vibrations, and scatter. There is a material which traps some kind of energy, or light. When this energy or light penetrates this material it is bounced around by rod-like inclusions and is contained within the material.
